

LIPODERM® TRANSDERMALS keep delivering...but don't take our word for it.

Latest competitive study proves that Lipoderm Transdermal absorbs better and faster.

Percutaneous Absorption Flux Profile of Ketoprofen:
(Mean from 3 Donors as $\mu\text{g}/\text{cm}^2/\text{hr}$)

Even when compared to the newest competitive studies, **Lipoderm Transdermal base can deliver Ketoprofen more quickly and with better absorption.** Not only does it deliver Ketoprofen more effectively, it also **delivers up to four actives simultaneously** - with the studies to prove it.

For your patients, this means less waiting for their actives to be absorbed and the potential for better outcomes.

For your practice, it means differentiating yourself from the competition and standing out with your prescribers.

No other transdermal on the market has been studied more and you don't have to take just our word for it!

For more information on Lipoderm and to review all four studies go to www.pccarx.com/lipoderm.

Above chart graphically illustrates the superimposed data from two independent Cetero Research studies with identical methods, both evaluating the permeation of 10% ketoprofen preparations through human skin *in vitro*.
